

ROMETRON
AUSTRALIA

**Fendt Rogator
900 Series
SPOT *and* BLANKET
ALL-IN-ONE with PWM**

WEED·IT 
precision spraying

FEATURES

- Custom WEED-IT system designed and installed by Rometron Australia for Spot Spraying and broadacre applications using PWM
- WEED-IT precision spot spraying technology
- WEED-IT precision blanket spraying technology
- 50 Hz Pulse Width Modulation (PWM)
- 25 cm nozzle spacing
- 1 metre sections
- 3 spray modes, spot spray, dual spray, blanket
- Automatic background calibration
- Works day and night
- ISOBUS
- Typical spot spray speeds of 15-18 kph

BENEFITS

- Simple operation
- Reduced chemical costs by up to 90%
- Frequent spraying of actively growing small weeds
- Use higher chemical rates with different / expensive chemistries on hard to kill weeds
- 50 Hz PWM (5 x faster than competitors)
 - Control your rate independent of speed and pressure
 - Maintain a constant droplet size over a wider speed range
 - Exact rate from each nozzle with turn compensation
- Maximise savings with 1 metre sections
- Significantly less chemicals in your soil

Technical support and engineering expertise

Rometron Australia's close relationship with Rometron in the Netherlands, who design and manufacture WEED-IT, means product development is focused on the needs of Australian farmers.

Together we are always striving to deliver the best product to suit our unique Australian conditions.

ABOVE: Catching up at WEED-IT headquarters in Steenderen NL. Many Engineering minds make light work! Rometron's R&D engineers Albert Bosscha (Left) and Youri Schoutsen (Right) with Rometron Australia's Technical Support Manager, Ryan Cale.

LEFT: Rometron Australia's General Manager, Hamish McIntosh, in the field taking a close look at where the WEED-IT has sprayed weeds, not dirt.

All new Fendt Rogator 900 with customised WEED-IT system

Rometron Australia are proud to be teaming with authorised AGCO dealers bringing the ultimate WEED-IT benefits to Fendt Rogator 900 operators. Bringing industry leading WEED-IT detection technology, paired with the beauty and precision of PWM, controlling rate at every nozzle across varying speeds and with turn compensation from day one when operators take possession of their new sprayer.
